# Foraminerals Symposium program

# 11 December 2019, De Ruimte, Distelweg 83 Amsterdam

Please reserve your seat at <a href="https://forms.gle/QKaraEFZ2GFmMcAX7">https://forms.gle/QKaraEFZ2GFmMcAX7</a> if you would like to attend the evening.

20:00 - Bar open, time to meet each other and the minerals

The evening will be moderated by Reef and Sponge scientists **Dr. Alice Webb** 

Performance artist **Ibelisse Guardia Ferragutti** will open the evening with a shamanistic ritual to invite the spirit of the mineral

## Part I 20:30-21:30

#### **Dr. Helen King** | Utrecht University

Biological architects: building with minerals

A 3D perspective on the mineral-based structures that biology makes as a consequence of its actions and on purpose, comparing minerals formed by microbial systems and us.

#### Sema Bekirovic | Artist

Reading by osmosis

The culture/nature dichotomy isn't as self evident as has long been held. If culture and nature can no longer be seen as opposites, what's to keep us from stretching things a little bit further, and proclaim nature to be capable of art, of authorship?

## Esmee Geerken | Netherlands institute for Sea research (NIOZ)

Future fossils

Looking at the evolution of architecture from a unicellular perspective, while taking rather big jumps through geological time.

## Dr. Willem Noorduin | Self organising matter group AMOLF

Shaping up matter

Inspired by natural processes, Willem's group explores how minerals can be sculpted into microscopic architectures.

#### Break

During the break, images of *Cogwheels* by Dr. Inge van Dijk (Alfred Wegner institute for Polar and Sea research) are displayed.

## Part II 21:45 - 22:45

Dr. Takashi Toyofuku | Japanse Agency for Marine Science and

Technology Tinv life

Takashi will show the beauty of tiny shapes created by the various organisms from his biomineralisation lab.

## Dr. Lennart de Nooijer | NIOZ

Blueprints Blueprints are representations of the essence of physical things and are, for Lennart, the best symbol of what science is all about.

## Prof. dr. Gert-Jan Reichart | Utrecht University

Paleoceanography Gert-Jan will elaborate on what biominerals tell us about the climate of the past, and how this can be used to better understand future climate change

## Jasper Coppes | Artist and filmmaker

Wisdom of the Ice

As an alternative to the typical images we see of the melting Greenland ice-sheet, Jasper will talk about his current film project, which emphasises on the perspectives of Greenlandic inhabitants from the biological and mineral world.

After the talks the bar will be open till around midnight to meet up and discuss
